This is a confidential report intended for use by, or under the guidance of, a trained professional or psychologist. For a full understanding of the analysis other relevant data such as ability, aptitudes, motivation, interests and work experience need to be considered.

Abstract Reasoning

The Abstract Reasoning Test assesses the ability to understand complex concepts and assimilate new information beyond previous experience. The test consists of items which require the recognition of patterns and similarities between shapes and figures. As a measure of reasoning it is independent of attainment and can be used to provide an indication of intellectual potential. Assessing the ability to quickly understand and assimilate new information it is likely to predict how responsive to training the person will be.

Fred's score on the Abstract Reasoning Test indicates that his performance was particularly poor when compared to the reference group. As a consequence he is likely to have some difficulty fully appreciating new, abstract concepts which are outside of his previous experience. He is likely to require a more structured approach to learning than the average expected of if he is to benefit from training and instruction. This would especially be the case if he is required to understand intricate and highly complex theoretical arguments.
